About

Intelligent Lighting Creations

Intelligent Lighting Creations (ILC) is a lighting and rigging production company servicing the trade show, corporate, concert, and special event industries. Scott Falbe founded ILC in 1994 when he identified a need for gear services for intelligent lighting fixtures. The company became the only source for this product and quickly broadened its inventory to include other hard-to-find, cutting edge lighting equipment including intelligent lighting control consoles. Since its founding, ILC has gained a national reputation as the place to go for the latest in intelligent lighting technologies and a high level of customer service.

ILC has also developed as a full service lighting rental house by expanding its inventory to include a full range of lighting equipment including dimmers, controllers, conventional fixtures, LED lights, associated cabling, rigging and truss. While expanding its inventory, ILC never lost sight of the high quality standards so important to its clients. The expansion has allowed ILC to work with nationwide clients at trade shows, corporate meetings, concerts and special events. Its prime, midwest location in Chicago allows it to serve its clients from coast-to-coast.

Service & Quality at Intelligent Lighting Creations

In order to provide turnkey customer support for gear services, ILC's team includes the most experienced lighting technicians and rigging specialists in the industry. Our equipment is rigorously tested by factory certified technicians before it goes out on your show. ILC is dedicated to quality. Seriously. We rip it apart, clean it, and test it because you have enough to worry about already. When you rent from ILC, you know we have your back.

“ I appreciate the level of customer service and creativity working with ILC. They always strive to have top quality gear and keep it in good working condition. I also appreciate their attention to detail and they are very approachable and responsible which matters to my crew and me. ”
