## About Production at **Intelligent Lighting Creations**

---

Lighting turns a great event into an exceptional event. Well produced lighting systems not only provide function and beauty but also help communicate branding and messaging. Events with exceptional lighting create the right atmosphere and compliment other production elements. When executed well, lighting systems disappear into the production and become an element that's experienced, not focused on by the audience. When putting together a production, it is critical and a wise decision, to work with an experienced lighting company.

Intelligent Lighting Creations (ILC) has over 20 years of experience in designing and delivering extraordinary lighting systems to productions and events around the country. Combined with our extensive inventory of lighting technology products and related services, ILC is ready to partner with you to implement professional lighting at your next event. Our services include:

- Event Consultation
- Design
- Project Management
- Event Preparation
- Visualization Services
- Project Labor
- Setup, Operation and Dismantle
- Logistics

Working with ILC is working with a partner who meticulously plans and executes lighting specifically for your event. Our team of experienced project managers, designers, electricians and logistic planners consider every factor for the production of your event and deliver within scope, schedule and budget. ILC's production team can provide or work with established lighting designers or technical directors.

Our equipment is carefully maintained to ensure proper function on the event site and ILC's project managers work to build redundancy into the system in appropriate places. ILC has one of the largest inventories of intelligent lighting equipment in the Midwest — we have the people and gear you need to bring together world class lighting systems. In addition, ILC works with numerous partners to provide other elements of a production such as audio, video, scenery, automation and specialized rigging. ILC employs ETCP (Entertainment Technician Certification Program) lighting technicians and riggers to ensure safety and technical success.

## Steven Wilson Tour

Intelligent Lighting Creations (ILC) first started working with Steven Wilson back in May of 2015. We are proud to be back on the road with the band supporting his current North America Spring Tour. Steven Wilson's lighting designer, Matthew Jensen, does a masterful job of creating a variety of theatrical looks with the ILC provided lighting and video package. The lighting package is mostly comprised of Clay Paky fixtures including B-Eye K-20, Mythos and Sharpy Washes, all backed by a 9mm semitransparent LED wall. Keep an eye out for additional dates this coming fall.

## Nike — Extreme Winter

“What’s that thing floating on the water?”, is a question you might of heard if you happened to be downtown Chicago last December. That thing was a floating barge built to house an outdoor fitness experience to motivate Chicago athletes to get outside in the cold Chicago winter. Intelligent Lighting Creations provided equipment and production support to

this extraordinary project. The structure was built off site in a time frame of about two weeks and was then towed through Lake Michigan, under three bridges and anchored into place on the Chicago River dock. Select running clubs and local sports teams were invited to be fitted with the latest in high tech outdoor performance gear in the pop up retail store next door. ILC was pleased to provide lighting equipment, rigging and production support to this awesome experience.

## Case Studies by Intelligent Lighting Creations

### GE Booth at Radiological Society of North America (RSNA)

RSNA is one of the largest tradeshows in the country. Attendees can participate in educational courses, explore technical exhibits and make networking connections during this four day show. ILC was thrilled to, once again, partner with the talented folks at Fine Design and provided lighting equipment and production assistance on this large project.

This year's GE Booth was a new design that occupied over 34,000 square feet of exhibit space. Miles of cable were used to connect over 400 automated and LED fixtures from Vari-Lite, Martin and Chroma Q. A Grand MA2 network of consoles and NPU's handled over 36 universes of DMX controls. ILC was delighted to work with such a top notch team on this project.

### Sandvik at the International Manufacturing Technology Show (IMTS)

Intelligent Lighting Creations provided equipment and production support for the Sandvik booth at the International Manufacturing Technology Show (IMTS). IMTS is a bi-annual industrial trade show featuring over 2,000 exhibits. ILC collaborated with the exhibit designers and fabricators from concept to execution. We

provided a fully automated lighting system to produce the modern, crisp, bright visuals the design called for. ILC's on site staff supervised the installation of the lighting and rigging systems on an extremely tight load-in schedule. ILC was proud to be part of this award winning project.
